Result: e/e (yellow/red coat)

Results summary:

Gene	Variant c.914C>T	Inheritance	Zygoty	Detection method
MC1R	Detected	Autosomal recessive	Homozygous	PCR-RFLP

Interpretation:

Allele E allows normal production of black pigment, while allele e disables production of black pigment and causes red/yellow pigment. To animals with e/e genotype, production of the black pigment is inhibited, resulting in yellow/red coat color. All of their offspring will inherit one e allele.
